

Yashwanth Naidu Kanajam

Boston, MA | yashwanthnaidu069@gmail.com

PROFESSIONAL SUMMARY

Data Analyst with 4+ years delivering analytics across healthcare and enterprise environments, with hands-on depth in payer-side claims analysis at adjudication level. Skilled in independently mining and validating large, complex healthcare datasets using SQL, Python, PySpark, and Snowflake, defining analytical cohorts directly rather than working from pre-filtered extracts at one million+ records per day. Proven track record of building reusable analytic assets rather than one-off answers, including validation and reconciliation checks that cut manual QA by an estimated 25+ hours per month, and of optimizing Apache Airflow ETL workflows that reduced data-retrieval time by 25%. Adept at turning ambiguous stakeholder requirements into documented KPI definitions and communicating findings clearly to technical and non-technical audiences.

TECHNICAL SKILLS

Healthcare Analytics: Claims Analytics, Claim-Header/Claim-Line Analysis, Claims Adjudication (Billed/Allowed/Paid/Member Responsibility/Status), ICD-10-CM, CPT, HCPCS Level II, Member & Provider Data, EHR Data, Cohort Definition, Utilization Analysis, HEDIS Measures, STAR Ratings, Population Health

Programming & Analytics: SQL, Python, PySpark, Advanced Excel, Pandas, NumPy, Scikit-Learn

Analytics Methods: Regression Analysis, Classification, Clustering, Exploratory Data Analysis (EDA), Machine Learning, Feature Engineering, Model Evaluation, Forecasting, Variance Analysis

BI & Reporting: Power BI, Tableau, KPI Dashboards, Data Storytelling, Executive Reporting

Data Quality & Engineering: Data Validation, Reconciliation, Anomaly Detection, Data Profiling, ETL/ELT, Apache Airflow, Databricks, Delta Lake, Azure Data Factory

Databases & Platforms: Snowflake, MySQL, Oracle Database, SQL Server, MongoDB, Microsoft Azure, Git

PROFESSIONAL EXPERIENCE

Data Analyst | Humana, Massachusetts, USA

August 2025 – August 2026

- Analyzed claims at claim-header and claim-line level, pairing ICD-10-CM diagnosis codes with CPT and HCPCS Level II service codes and tracing adjudication fields (billed, allowed, paid, member responsibility, final status) for claims billing and coding analysis.
- Independently wrote SQL to define and filter analytical cohorts rather than working from datasets pre-filtered by others, mining claims, member, provider, and EHR data at one million+ records per day using Python and PySpark on Databricks/Delta Lake (Azure).
- Built reusable SQL and PySpark validation checks across six data-quality domains (code completeness, service dates, member/provider identifiers, duplicates, adjudication status, source-to-report reconciliation), cutting manual QA by an estimated 25+ hours per month.
- Built reusable Power BI and Tableau dashboards with defined KPIs, filters, and drill-downs tracking HEDIS measures, STAR performance metrics, utilization, and population health trends for clinical, operations, and leadership stakeholders.
- Prepared clean, validated datasets for utilization forecasting and high-risk member cohort identification, contributing to a care-management initiative associated with an approximate 12% cost reduction; partnered with clinical, operations, and finance teams.

Data Analyst | Accenture, India

January 2023 – January 2024

- Automated recurring analytics workflows in Python and SQL, improving processing efficiency by 15% and cutting reporting error rates by 30%.
- Optimized SQL and Apache Airflow ETL workflows, reducing data-retrieval time by 25% and accelerating delivery of analytics-ready data.
- Built automated validation checks and source-to-report reconciliation controls, reducing recurring data-quality issues by approximately 25%, and delivered KPI analyses supporting operational prioritization.
- Contributed to a process optimization initiative recognized for approximately \$50,000 in annual savings through improved reporting efficiency and workflow automation.
- Mentored data analyst interns on SQL, dashboarding, and analytical workflows, improving team productivity by approximately 25%.
- Reduced manual report preparation time by approximately 20% by standardizing Excel and SQL-based data preparation workflows.

Data Analyst | Hexaware Technologies, India

March 2021 – December 2022

- Analyzed complex datasets with SQL, Python, and Excel to surface performance trends, variance drivers, and operational improvement opportunities.
- Developed interactive Power BI and Tableau dashboards for KPI monitoring, reducing manual reporting effort by approximately 30% and delivering reusable reporting assets.
- Reconciled multi-source datasets using SQL joins, validation controls, and exception analysis, reducing reporting discrepancies by approximately 20%.
- Built Excel-based forecasting models and reusable SQL reporting workflows, reducing recurring report turnaround time by approximately 25%.
- Identified underperforming segments through KPI comparisons, enabling stakeholders to focus on areas with measurable improvement potential.

Data Analyst Intern | Freshworks, India

August 2020 – January 2021

- Cleaned, transformed, and standardized business datasets using SQL and Excel, resolving missing values, duplicate records, and inconsistent formats before analysis.
- Developed reusable SQL queries and Excel reporting templates for KPI tracking, scheduled reporting, dashboard refreshes, and ad hoc stakeholder requests.
- Validated Power BI and Tableau reporting outputs and investigated performance variances to improve consistency across recurring analytics workflows.

EDUCATION

M.S. in Information Technology, University of Massachusetts Boston, Boston, MA

December 2025

B.Tech, Computer Science & Engineering, CMR College of Engineering & Technology, Hyderabad

June 2022
